

Amgen Helix Pedestrian Bridge

Amgen Seattle Campus, Seattle, Washington

Amgen's Pedestrian bridge throws a curve

client... *Dynamic Structures*

Amgen, a leading human therapeutics company in the biotechnology industry, decided to throw a curve into their 400 ft. pedestrian bridge. The large curved pipes, fabricated by Dynamic Structures, represented the double helix of DNA.

Tight erection tolerances, irregularly weighted parts and a busy train route all added to the complexity of the steel erection.

KWH provided a tie-back erection scheme with temporary stays to overcome these problems and allowed unimpeded train passage under the bridge.
